## Intellectual Property

 [Print Version](#)

Increasingly, effective representation in intellectual property disputes requires highly developed economic and financial analysis. At CapAnalysis, we identify critical issues and perform incisive evaluations, including assessments of lost or reduced profits, price erosion, reasonable royalties, future damages, and mitigating offsets. We also work closely with counsel to assess the value of brand names, licensing agreements, and other Intellectual property.

Clients benefit from our extensive economic and financial expertise developed in and applied to patent, trademark and copyright litigation, trade secret, royalty, and trademark licensing matters, and technology transfer and licensing cases covering a broad range of industries. Our economic and financial experts determine damages, measure the impact of trademark infringement, evaluate the competitive effects of patent misuse, and critique opposing experts' claims and testimony.

We also apply innovative approaches and state-of-the-art techniques to address non-infringing substitutes, ability to meet market demand, "but for" price, output and profit analyses, market expansion effects, incremental costs, and the firm-specific values of access to intellectual property used in determining royalties.
